

WHAT HAVE WE BEEN UP TO?

GETTING BACK TO NORMAL

This year has been a weird one and we are slowly trying to get back to normal. With COVID-19 shutting our factory for several weeks and having to work from home the situation has been a stressful one for us all. Hopefully, we are now getting back to some sort of normality, our factory is open and has caught up on any delay shutdown caused and we are back in the office ready for your enquiries. Please feel free to contact us, we are here to help.

RECENT PRESS RELEASES

FANS IN HURRY

We are proud to announce our fast lane product range. Our same high quality and reliable fans **available in 15-20 working days**. Have a look on our website for more details on flow rates, pressures, and power options.

3D DRAWINGS

We can now offer 3D drawings of our fans with standard features and accessories. If you require these please do not hesitate to contact us with your fan plate details.

ARTIC FANS

We would like to announce the launch of our extreme cold temperature centrifugal fans, suitable for applications needing to work at a temperature of -60°C . Our Artic fans can be constructed in a choice of carbon or stainless steel to meet the specifications of the application. We can supply these fans in direct or belt-driven arrangements. In the case of belt-driven, the belts and pulleys would be constructed in special materials to meet the needs of working at lower temperatures.

MARINE FANS

We have a range of centrifugal and axial fans for Marine environments. These fans are suitable for installation in essential or civil service cruise ships, cargo ships and offshore platforms. The fans are resistant to the corrosive atmosphere and harsh conditions of these environments. Ferrari prioritise these conditions when designing the Marine fan range to ensure their durability.

For more information on these products please contact us or visit our website for more details.
